- Modeling of individual or group choice behaviour: valuation, social preferences, impulsivity, strategy, network models
- Neurobiological mechanisms: human neuroscience, model organisms, behavioral neuroscience, genetic approaches, comparative approaches
- Clinical approaches: pharmacology, psychiatric disorders, neuropsychological conditions
- Development of interventions to improve individual and/or group decision-making outcomes
- Broad applications: artificial intelligence, courts/law, education, finance, health/medicine, government/public policy, intelligence, labor, technology
