Do you provide fair and unbiased reviews?

Unconscious bias affects our judgment without us realizing it—and this can influence the review of a grant. Due to unconscious bias, peer reviewers may rate an application differently based on the gender, age, language, culture or even the affiliated institution of an applicant. To help identify potential sources of unconscious bias and mitigate them, CIHR has developed a learning module. The full module is now available online and is **mandatory** for peer reviewers.

Test yourself - try the 19-minute [Unconscious Bias in Peer Review](#) training module now.
