

Update on the Tri-Agency Research Data Management policy

Sponsor

CIHR, NSERC, SSHRC

Description

CIHR, NSERC and SSHRC have postponed launching the [Tri-Agency Research Data Management Policy](#) [1] until further notice, due to the impacts of the COVID-19 pandemic. Once launched, the agencies will continue to collaborate with the research community to phase in the policy requirements.

The current pandemic has illustrated the critical role that research data management plays in building a research system that reflects the FAIR principles – that data are findable, accessible, interoperable and reusable. Many researchers, research institutions, stakeholder organizations and other groups have worked diligently during the COVID-19 pandemic to support research data management. This includes data management planning, institutional support for research data management, and data deposit and access. The agencies encourage our community to continue these efforts to further research data management in Canada and abroad.
