

UPDATED Guidance note for COVID-19 related research continuity, scale back, and shut down

The guidance note has been updated to include the recent Office of Research directives on research continuity, scale back, and shut down.

Further guidance has been developed for conducting ongoing scaled-back research in [a CAF, a livestock facility and a field-crop facility](#) [1].

Last updated: April 17, 2020.

Consistent with public health policy, and following consultation with colleges, **the Office of Research urges, in the strongest terms, the significant scale back of research activities, with the aim that scale back is done to reinforce physical distancing.**

Following extensive consultations and guidance, and consistent with public health policy, the Office of Research has issued the following directives pertaining to ongoing research until notified otherwise:

1. Any research that proceeds must comply with these guidance notes from the Office of Research.
2. Any research that proceeds must not contravene the directives provided by the [Office of Graduate and Postdoctoral Studies](#) [2].
3. Any research that proceeds must not contravene the directives provided by the [University of Guelph](#) [3].
4. Any research that proceeds must abide by University of Guelph policies pertaining to workplace health and safety, including required adjudication and approvals at the departmental/school, college, and university levels.
5. Any research that proceeds must have appropriate supports, including custodial, administrative, financial, and others needed to sustain the research activities.
6. No research is to be conducted with human participants that requires face-to-face contact (e.g., physical assessments, in-person interviews). If a researcher is concerned that this directive will impact the health of study participants, an exemption request may be submitted for review and institutional approvals.
7. Research that is not impacted by physical distancing policies, such as research that can be completed remotely (e.g., online), may continue provided that normal approval processes for such activities have been followed.
8. Any ongoing, scaled-back research that makes physical use of University of Guelph-operated facilities should only be for maintenance of research assets or for time-sensitive and/or critical research (see details in #9), and must be approved by the Chair or Director (or their designate) of the academic unit to which the researcher is appointed. In the case of Research Centres and Institutes, information on ongoing, scaled-back

research activity research that makes use of University of Guelph-operated facilities, should be for maintenance of research assets, and must be presented to, and approved by, the Dean (or their designate) of the college to which the centre or institute is primarily affiliated. Guidance has been developed for conducting ongoing scaled-back research in [a CAF, a livestock facility and a field-crop facility](#) [1].

9. No new research should be initiated that makes physical use of University of Guelph-operated facilities. Exceptions to this may be granted for research assessed as critical and/or time sensitive (e.g., research supported by emergency COVID-19 funding; research focusing on COVID-19 or pandemics; research dependent on the seasonal nature of crops and/or livestock, etc.). Researchers seeking exemption from this restriction on new research should use the [Request Form for Critical and Time-Sensitive Research](#) [4], and submit their case to their Chair/Director (or their designate) for submission to the Office of Research through their ADRGS, or, in the case of Research Centres and Institutes, to the Dean of their primary college affiliation for submission to the Office of Research. Approved new research must follow the guidance which has been developed for conducting ongoing scaled-back research in [a CAF, a livestock facility and a field-crop facility](#) [1].
10. No new research should be initiated that makes physical use of facilities beyond the confines of University of Guelph. This includes public facilities such as parks and/or field sites, as well as privately-owned properties, such as farms and/or industrial sites. Exceptions to this may be granted for research assessed as critical and/or time sensitive (e.g., research supported by emergency COVID-19 funding; research focusing on COVID-19 or pandemics; research dependent on the seasonal nature of crops and/or livestock, etc.). Researchers seeking exemption from this restriction on new research should use the [Request Form for Critical and Time-Sensitive Research](#) [4], and submit their case to their Chair/Director (or their designate) for submission to the Office of Research through their ADRGS, or, in the case of Research Centres and Institutes, to the Dean of their primary college affiliation for submission to the Office of Research.
11. Current, on-going animal studies may be completed, provided that the research is approved as per items 8, 9, or 10 above and adaptations to protect staff, namely physical distancing and limiting the number of researchers in the animal facilities, can be implemented. Any animal-based research requiring intake of new animals will be undertaken only on a very limited basis, and not without consultation with managers of research animal facilities and an approved animal use protocol (AUP). Researchers seeking to order new animals must use the [Request Form for Critical and Time-Sensitive Research](#) [4], and submit their case to their Chair/Director (or their designate) for submission to the Office of Research through their ADRGS, or, in the case of Research Centres and Institutes, to the Dean of their primary college affiliation for submission to the Office of Research. Priority will be given to research that has a very narrow window in which it can be initiated or which are COVID-19 studies. Priority will be given to care of existing animal populations, over intake of new animals.
12. Researchers must develop plans to close down existing research within University of Guelph-operated facilities on short notice, including plans for waste disposal and identification of essential services to maintain research samples, facilities and infrastructure where appropriate. The shut-down plans should take guidance from these notes provided by the Office of Research. Shut-down plans should be shared with and approved by the Chair or Director (or their designate) of the unit to which the researcher is appointed. In the case of Research Centres and Institutes, the plan should be presented to, and approved by, the Dean (or their designate) of the college to which

the centre or institute is primarily affiliated.

In the Office of Research, we understand that members of the research community are concerned, and we want to assure everyone that we are doing everything we can to ensure the health and safety of our research community, and the long-term, continued success of University of Guelph's research enterprise.

We continue to provide existing research services to ensure research continuity; thus, all Office of Research units remain operational. During these exceptional circumstances service delivery may be delayed, and we appreciate your patience.

Staying informed

Faculty members have a responsibility to their staff, students, and research participants to ensure that certain precautions are taken.

The University's [COVID-19 webpage](#) [5] has updates, answers to frequently asked questions, and general information about COVID-19, including how to reduce the risk of exposure and transmission. The University will continue to monitor the 2019 novel coronavirus situation and provide updates on this page as needed.

Please refer to the [Office of Research COVID 19 web-page](#) [6] for directives related to research activities at the University of Guelph.
