Sorry for the delay

I have reviewed the protocol as well as some published USA studies using the sensor. I consider it safe. In the protocol, I would suggest removing "abnormally small esophagus" as this is not a medical term. I would replace it with "a narrowing of the esophagus". Otherwise good to go.

Dr. Collins,

Attached is an email sent some time ago, requesting your opinion on the safety of the device. I wonder if you could have a look at this now. The researcher has applied once again to use the device.

Note that the website address is now <http://www.hqinc.net/cortemp-sensor/>

Your input will be greatly appreciated.

Sandy
